

## Optical Fibre Cleaning Kit

A fibre optic cleaning kit is essential to ensure the proper removal of any contaminants that may occur on fibre optic components (refer Figure 1).

Contamination may occur through contact with dirt, lint or even perspiration.

Examples where Amphenol's fibre optic cleaning kit may assist are:

- A previously clean connector is shown to be contaminated by contact to another connector, and both connectors are then required to be cleaned before re-mating.
- A cleaned connector is to be inserted into a possibly contaminated thru adapter.

Careful handling will ensure that maximum performance and product life can be obtained for all fibre optic components.

**Product Code:** 66010003-000

### APPLICATIONS

- Fibre Optic Connector
- Fibre Optic Assemblies
- Fibre Optic Adaptors

### FEATURES

- Ruggedised re-sealable plastic container
- Components available separately to refill Amphenol Optical Fibre Cleaning Kit
- Includes:
  - Cleaning Fluid (Iso-propyl Alcohol)
  - Cloth Buds
  - Cleaning tissue
  - Medi Swab
  - Gloves
  - Flipseal cap
  - Plastic Snap tight box
  - Data Sheet
- Does not require the use of freon or dry air cans.
