

## Product Change Notice

### ----- Crimping die improvement for hand crimping tool H4TC0001

To Our Valuable Customers:

First, thank you very much for your support and confidence in Amphenol's solar products. At Amphenol we strive to produce the best quality PV products in the world, and as such are continually looking for improvements that benefit the end-users of them. It is our goal to not only foster the best experience with our products, but also the best functionality in them.

As part of that philosophy, in order to improve the performance of the specific hand crimping tool for H4 cold forming contacts, we made a change to the crimping die on the tool. The new die is manufactured with an innovative process, granting forefront quality standards in terms of crimping results and performance stability for our H4 connectors.

From below the pictures you will see the difference between the old and the new crimp die:

Old crimping die

New crimping die

Once again, thanks and best regards,

The Amphenol Technology (Shenzhen) Co., Ltd Team
